

Labthink[®]

SINCE
1989

OXYGEN TRANSMISSION RATE TEST SYSTEM

Oxygen Transmission Rate Test System

Oxygen Transmission Rate (OTR) Test System is designed and manufactured based on the coulometric sensor method (equal pressure method) and conforms to ASTM D3985, ISO 15105-2, ASTM F1307, ASTM F1927(option), DIN 53380-3 and JIS K7126-2-B.

Combo Model

C403H & C406H

- OTR & WVTR testing capacities
- Cost & space saving
- Higher ROI
- High intelligence

C403H

C406H

Premium Model

C206H & C203H

- Labthink patented coulometric sensor
- User friendly operation
- Fully automatic
- High efficiency

C206H

C203H

Medium Model

C203M & C230M/H

- Three-cell design
- Quick test for QC
- Wider testing range

C203M

C230M/H

Entry Model

C201H & C201B

- One-cell design
- Space saving
- Affordable
- Wider application for both film & package test

C201H

C201B

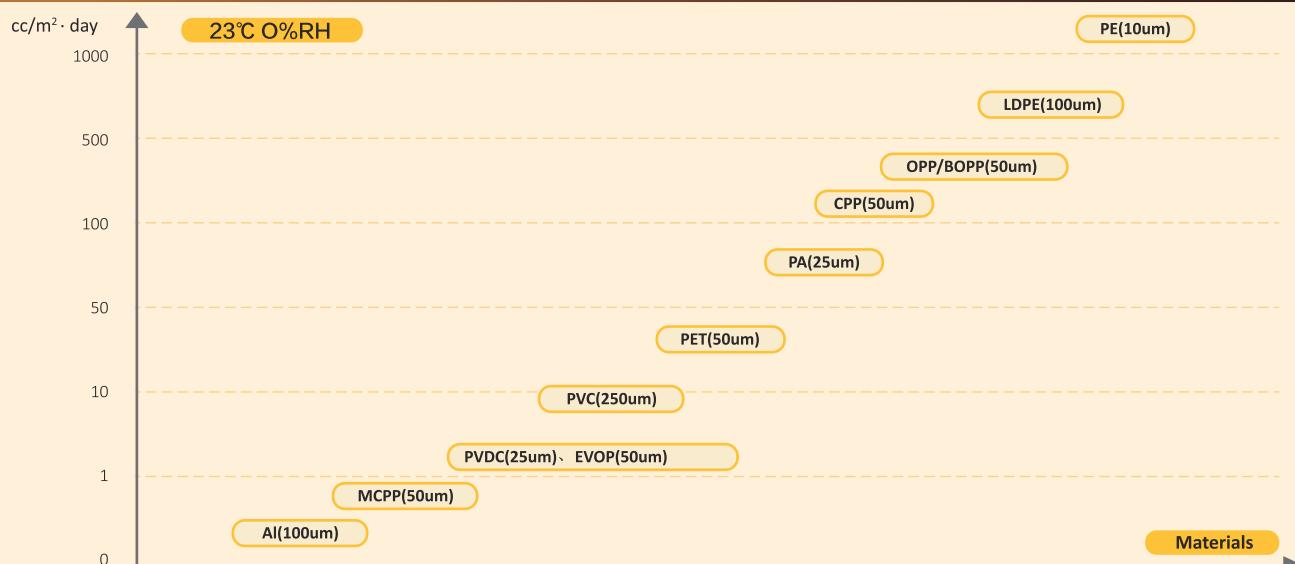

Comparison on all OTR models

OTR Tester (Coulometric Sensor Method / Equal Pressure Method)

Standard: ASTM D3985, ISO15105-2, DIN53380-3, ASTM F1307, ASTM F1927 option

Introduction on C203H & C206H

C203H Features

- 360 ° air circulation constant temperature technology
- Long service life of sensors
- Automatic sample clamping for time and labor saving with consistent clamping force
- Three samples are tested at the same time under the same condition to obtain three independent results

C206H Features

- Six-cell structure features ultra-high testing efficiency
- Multiple testing modes for different testing purposes
- Stable and automatic temperature & RH control
- Intelligent and easy to use

Accessories

Sample Holder

- Easy to use
- The specimen can be quickly clamped and easily removed
- It can quickly and accurately locate test specimen on the test chamber
- Avoid specimen contamination during specimen clamping

GP-01 Gas Purification Device

- Independently developed by Labthink
- Remove trace oxygen in carrier gas
- Long life without regeneration
- Maintenance free
- No need to use nitrogen with a small amount of hydrogen
- Reduced cost for carrier gas

Mask When 5cm² mask is used

	OTR instrument C203H
Standard test range	0.01-200cc/ (m ² · day)
Extended test range with mask	0.1-2000cc/ (m ² · day)

Package Testing Accessories

B2-110

PTC-01A

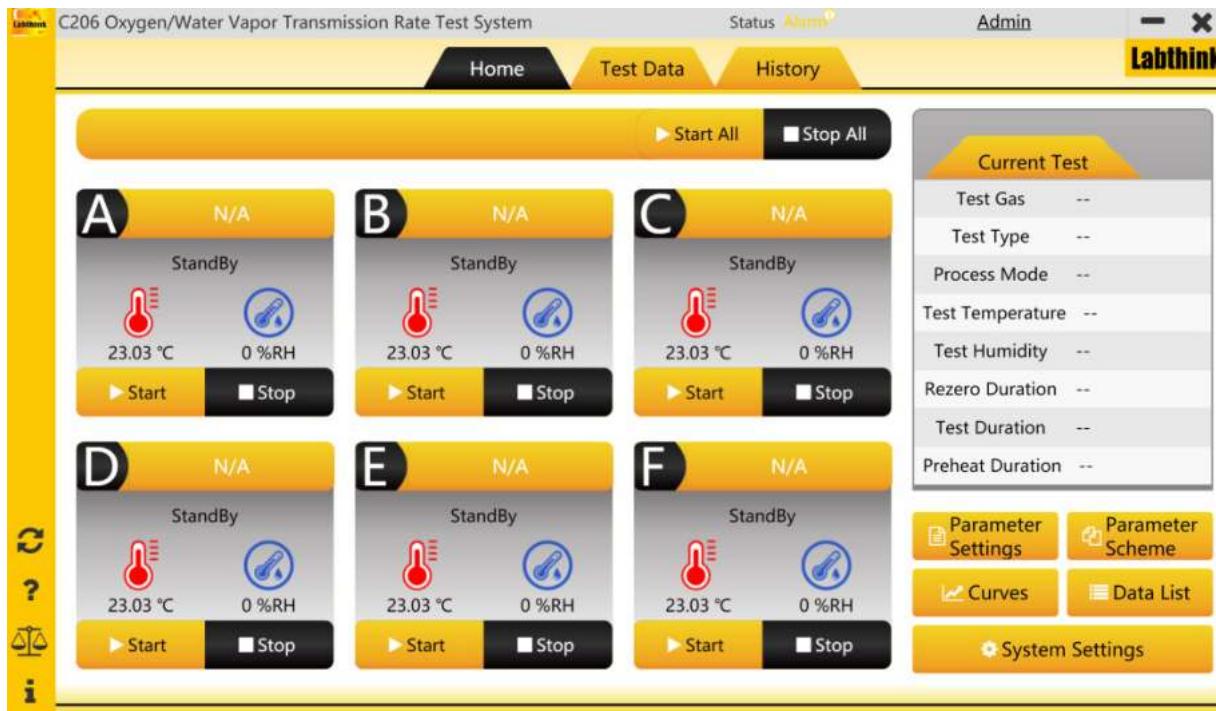

Software

Multiple testing modes to meet different customer needs

Test mode	Experience of materials and instrument	Application
Auto mode	No experience	For beginners
Efficient mode 8 hours	A little experience	For quick QC/QA testing to meet routine multi-batch product testing requirements
Efficient mode 24 hours	A little experience	For quick QC/QA testing to meet routine multi-batch product testing requirements
Expert mode	Rich experience	For materials R&D

1 Home Interface

Easy parameter setting and a clear display of the current status of the six cells.

2 Real Time OTR, Temperature, Humidity

Real time viewing of test data curves, various testing conditions, preset parameters and test results.

3 Test Report

The test report can be exported in multiple formats, including Word, Excel, and PDF.

Test Report			
Test Parameter			
Cell	A	Test Type	OTR
Test Name		Specimen Name	#9
Specimen Material		Specimen No.	
Operator	Admin	Test Date	2021-03-25 17:00:00
Test Time	17:00:00	Lab Temperature	23.0 (°C)
Lab Humidity	30.0 (RH%)	Standard	
Inspection Organization		Specimen Provider	山本邦史
Specimen Batch	20210325000000	Test Type	Advanced
Test Gas	O ₂	Process Mode	Cycle
Test Temperature	23.0 (°C)	Test Humidity	0.0 (RH%)
Rezero Duration	60.00 (min)	Zero Purging Interval	1
Preflow Duration	1.0000 (s)	Compensation	30
Note	Standard	Test Count	3
Test Duration	30.00 (min)	Specimen Area	50.00 (cm²)
Specimen Thickness	0.00 (μm)	Water Bath	Close
Test Result			
Transmission Rate	28.5464 (cc/m² day)	Oxygen Permeability Coefficient	5.434e-12 (cc·cm/(cm²·day))
Data Curve			

4 Query

Input query criteria to retrieve relevant test records from the historical tests.
Simply click the "More Query" button to display all available query criteria.

The screenshot shows a software interface with a yellow header bar. On the left is the Labthink logo. In the center, the status is shown as 'Normal'. On the right, there's an 'Admin' button and the word 'Labthink'. Below the header, there are tabs: 'Home', 'Test Data', and 'History', with 'History' being the active tab. Underneath the tabs are four input fields: 'Test Name', 'Specimen Name', 'Specimen ID', and 'Specimen Batch'. Below these fields is a checkbox labeled 'More Query' and a note 'Double click to check test report'. To the right are buttons for 'Query', 'Reset', 'Report', 'Export', and 'Delete'. The main area is a table with columns: 'Operation', 'Test ID', 'Test Gas', 'Cell Transmission Rate', 'Test Name', 'Specimen ID', 'Specimen Name', 'Specimen Batch', and 'Specimen Material'. The table contains 11 rows of data, each with an 'Export Tag' button. At the bottom of the table are search filters ('Test ID', 'Start Time') and a pagination control showing '117 Item(s)' and page numbers '1 / 12'.

5 Role Management

Different roles can be authorized to ensure data security.

The screenshot shows two parts of the software interface. On the left is a 'System Settings' panel with tabs: 'Controller Settings', 'User Mgmt', 'Data Mgmt', 'Net Settings', 'Security Settings', 'Storage Settings', and 'Custom Info'. The 'Data Mgmt' tab is active. It has sub-tabs: 'User Mgmt' (selected), 'Role Mgmt', 'Operation Log', 'Sensor Calibration', and 'Film Calibration'. Below this is a table with columns: 'NO.', 'Role Name', and 'Operation'. It lists three roles: 'Technician', 'Engineer', and 'Admin', each with 'Modify' and 'Delete' buttons. On the right is a 'Add Role' dialog box. It has a 'Role Name' field containing 'Technician'. A large list of permissions is shown, grouped by category: Param (Param Set, Param Reset), Param Scheme (Maintain Param Scheme, Delete Param Scheme, Set Default Param Program, Load Param Scheme), Calibration (Sensor Calibration, Film Calibration), and System (System Settings, Security Settings, Storage Settings). At the bottom are 'OK' and 'Cancel' buttons.

Labthink New Generation Coulometric Oxygen Sensor

- Designed in conformity with ASTM D3985, the Labthink Coulometric Oxygen Sensor ensures longer service life and lower maintenance cost.
- Sensor over-range warning and automatic protection features also provide added safety and reliability.
- Compared to other coulometric oxygen sensors, the new Labthink Coulometric Oxygen Sensor offers significant advantages in terms of annual attenuation rate, lifetime, and maintenance costs.

The Difference in Terms of Absorption Process

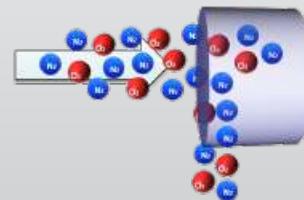

Coulometric Oxygen Sensor

All permeated oxygen molecules transported by nitrogen carrier gas, enter the Coulometric oxygen sensor, and then react completely to generate electrical current.

Partial Absorption Oxygen Sensor

The permeated oxygen molecules carried by nitrogen gas hit the surface of Partial Absorption Oxygen Sensor, but not all of them shall enter the sensor. Only a small portion permeates through the external surface of the oxygen sensor and reacts to generate electrical current.

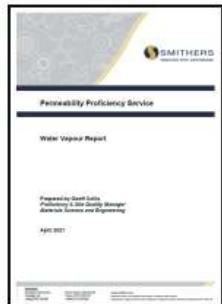

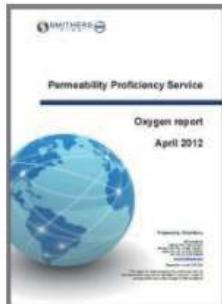

The Difference in Terms of Purposes

Test mode	Coulometric Oxygen Sensor	Partial Absorption Oxygen Sensor
Detection Limit	PPB Level, 10^{-9} Oxygen concentration	PPM Level, 10^{-6} Oxygen concentration
Accuracy of Trace Oxygen	High	Low
Overload at High Oxygen Concentration	Yes	No
Applicable Materials	Low, medium, high and ultra high barrier	Low, medium, and high barrier
Service Life	More than 5 years	2-3 years

PIRA Data Comparison Program

PIRA Lab Data Comparison

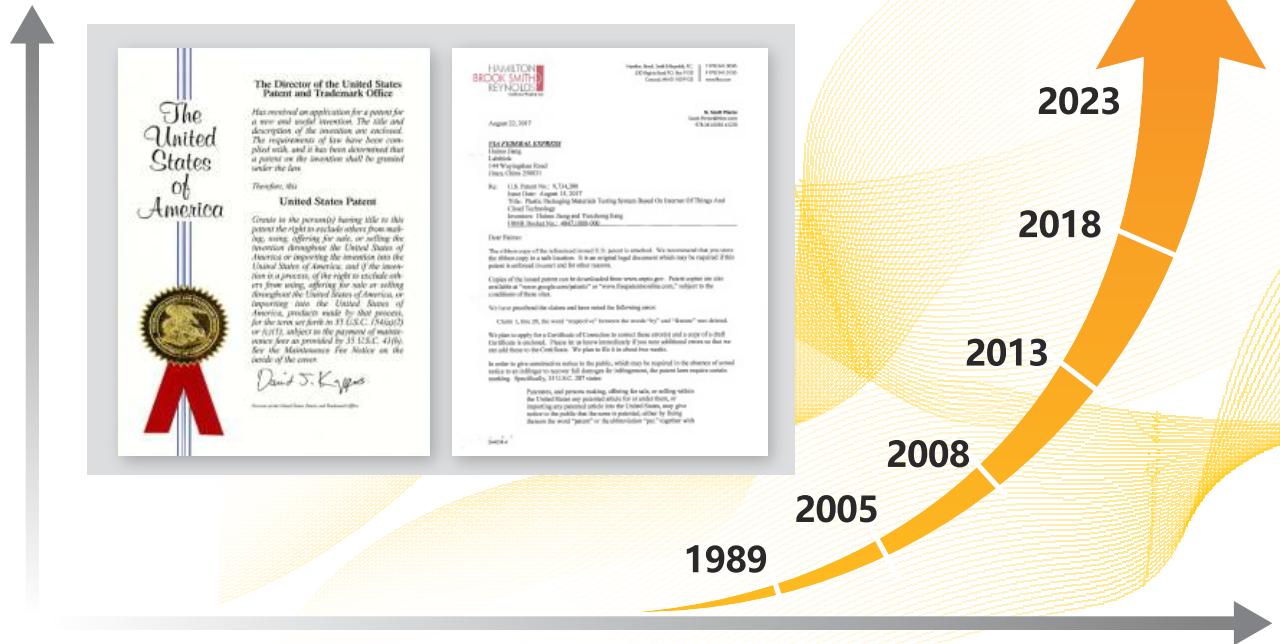

Since 2008, Labthink has been participating in the PIRA global barrier property test data comparison twice a year.

Note: PIRA, founded in 1930, is an international packaging research institute. It regularly organizes inter laboratory testing programs that have become the most important activity in packaging testing field.
